

## Why Study Psychology?

Epidemiology means the study of disease distribution within a population.

Disease is the objective state of ill/healthy, which may be verified by accepted conventions of proof  
Ex: microscopic analysis may yield evidence of changes

Mind is the subjective.

Your environment conditions you - !

## Schools of Psychology

# Cognitive - Humanistic - Behavioral - Psycho

Biodynamic - Biological -

Biopsychologists are often accused of reductionism, which means that they reduce the person down to their biological components so explanations of human behavior are said to be due to anatomy or physiological changes such as chemical reactions in the brain and NBAM  
1352 <sup>endocrine</sup> system.
